### READ THESE INSTRUCTIONS FIRST

Write your Center number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a pencil for any diagrams or graphs.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer **all** questions.

Electronic calculators may be used. You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together. The number of marks is given in brackets [] at the end of each question or part question.

This document consists of 19 printed pages and 1 blank page.

- 1 Flowering plants are classified into two groups, the monocotyledons and the eudicotyledons (dicotyledons).
  - (a) Complete Table 1.1 to show differences between these two groups.

## Table 1.1

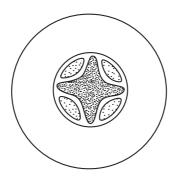

|                                    | monocotyledons | eudicotyledons |
|------------------------------------|----------------|----------------|
| number of cotyledons in seed       |                |                |
| pattern of veins in leaf           |                |                |
| number of flower parts e.g. petals |                |                |
|                                    |                |                |

[4]

For

Examiner's Use

- (b) State two environmental stimuli that flowering plants can detect.
- (c) Fig. 1.1 shows a cross section of part of a eudicotyledonous (dicotyledonous) plant as seen through a microscope.

(i) Name the part of a plant through which the section has been cut.

(ii) On Fig. 1.1, draw a line to label the phloem tissue and a line to label the xylem

Label the phloem and xylem tissues.

tissue.

[2]

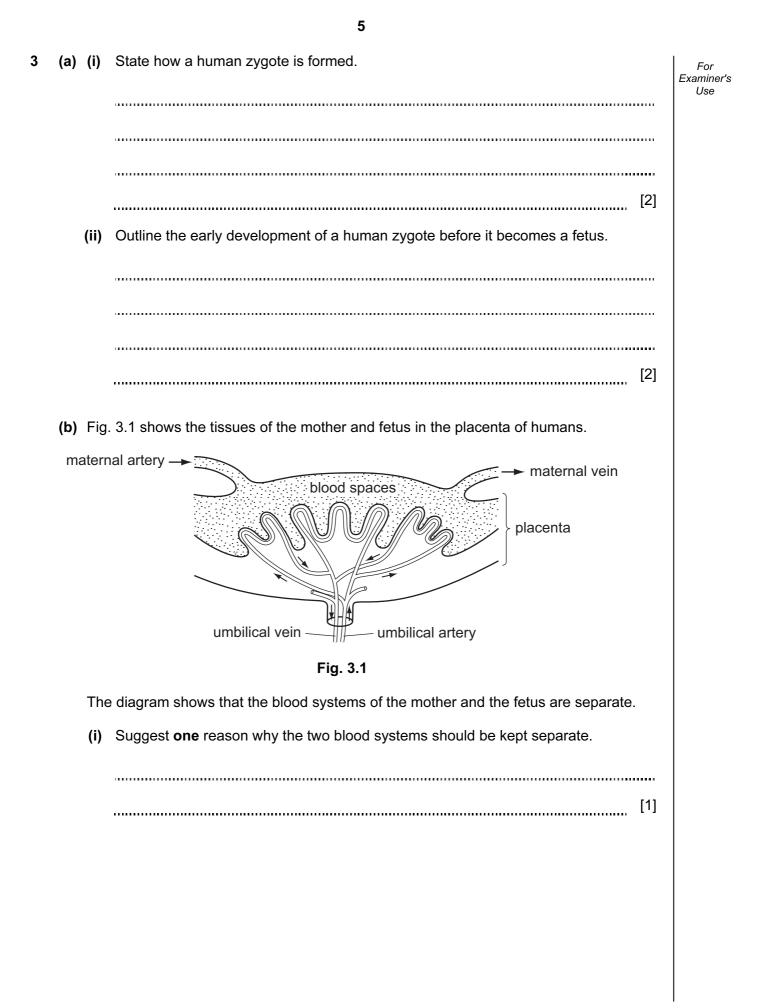

| (iii) | Describe <b>two</b> functions of xylem tissue. | For<br>Examiner's |

Question 4 begins on page 8.

4 (a) Sulfur dioxide is a pollutant gas produced when some types of fossil fuel are burnt.
 Describe three undesirable effects of sulfur dioxide pollution.

 1

 2

 3

 [3]

(b) Sulfur dioxide in the air can affect a type of organism called a lichen.

Fig. 4.1 shows the numbers of three types of lichen, K, L and M, growing near to an industrial site that releases sulfur dioxide.

(i) State which type of lichen grows closest to the industrial site.

(ii) State which types of lichen you would expect to find growing 5 km from the industrial site.

[1]

8

For Examiner's Use

[1]

| (iii) | Explain which type of lichen is most affected by the sulfur dioxide.   | For<br>Examiner's<br>Use |
|-------|--|--------------------------|
| (iv)  | Calculate how many lichen plants you would expect to find in a 20 m <sup>2</sup> area at 10 km from the industrial site.<br>Show your working. |                          |
|       | lichen plants [2]<br>[Total: 9]  |                          |

- (a) An investigation was carried out by a student on the effect of temperature on the 5 digestion of fat by an enzyme. Examiner's
  - (i) Name an enzyme that digests fats.

[1] .....

For

Use

(ii) One product of fat digestion is fatty acids.

Name the other product.

[1] .....

Six test-tubes containing the same volume of olive oil and the enzyme solution were set up.

One drop of an indicator was added to each test-tube.

The six test-tubes were labeled and placed in separate water baths at different temperatures.

The indicator was blue at the start and changed to yellow when the pH fell to pH 5 or below.

The time for the contents of each test-tube to turn yellow was recorded.

(iii) Suggest why the pH of the mixture would fall as digestion takes place.

[1] .....

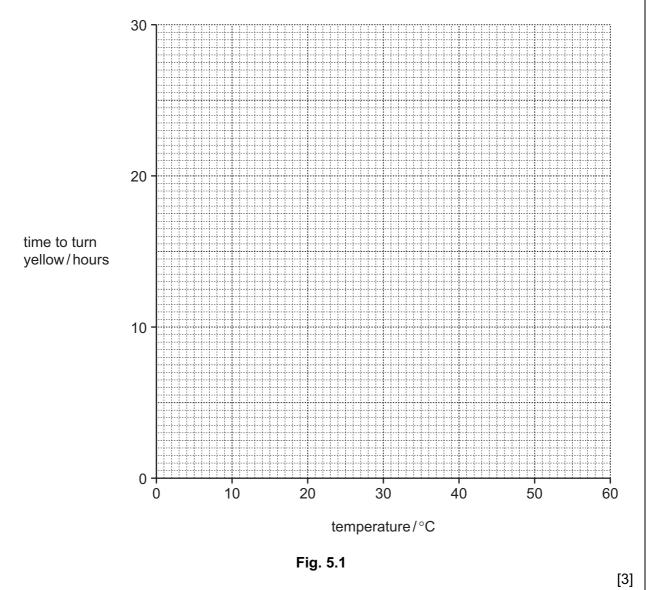

Question 5 continues on page 12.

(b) Table 5.1 shows the results of this investigation.

| temperature / °C | time to turn yellow / hours |
|------------------|-----------------------------|
| 5                | 23                          |
| 15               | 14                          |
| 25               | 8                           |
| 35               | 5                           |
| 45               | 15                          |
| 55               | 29                          |

#### Table 5.1

(i) Plot the results on Fig. 5.1.

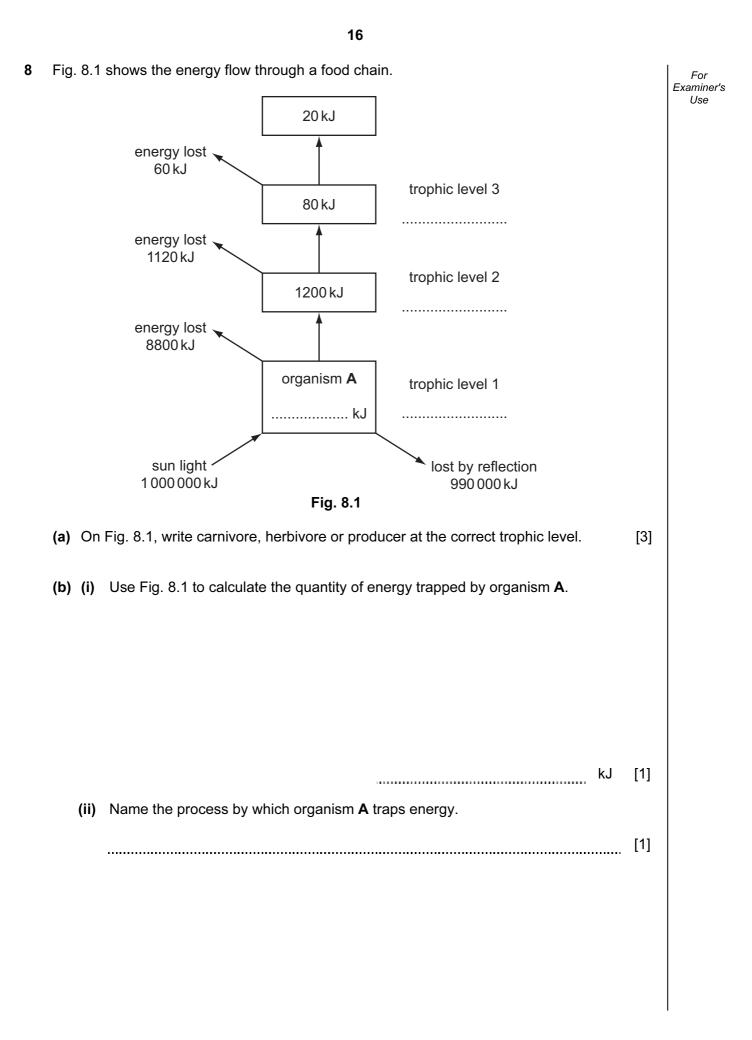

| (ii) | State the temperature at which the reaction was fastest (optimum temperature).  | For<br>Examiner's   |
|------|---|---|
|      | [1]   | Use   |
| And  | other student repeated the investigation.                                       |   |
| Thi  | s student added bile to each test-tube, as well as the enzyme.                  |   |
| (i)  | Explain the function of bile in the digestion of fat.                           |   |
|      |   |   |
|      |   |   |
|      |   |   |
|      |   |   |
