Paper 5 Practical Test

October/November 2007

1 hour 30 minutes

Candidates answer on the Question Paper.

Additional Materials:

As listed in Confidential Instructions.

#### **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO **NOT** WRITE IN ANY BARCODES.

Answer all questions.

Chemistry practical notes for this paper are printed on page 8

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

For Exam	iner's Use
1	
2	
Total	

This document consists of 6 printed pages and 2 blank pages.

1 You are going to find out how the current through a piece of wire varies with its length. The circuit has been set up for you and is shown in Fig. 1.1.

For Examiner's Use

Fig. 1.1

(a) S, the value of the resistance of one metre of the wire AB, has been given to you. State this value.

$$S =$$
 ohms [1]

- (b) Using the crocodile clip, complete the circuit by touching the wire at the 10.0 cm (y = 10 cm) mark on the ruler. Read the current I and record this value in Fig. 1.2.
- (c) Repeat this measurement of current for four further values of **y** between 20.0 and 90.0 cm. Record your measurements in Fig. 1.2.

length <b>y</b> /cm	resistance <b>R</b> /ohms	current I/amps	current x resistance IR/volts
10.0			

(d) (i) Calculate R the resistance of the wire for each length of y using the formula

$$R = \frac{\mathbf{S} \times \mathbf{y}}{100} .$$

**S** is the value recorded above in **(a)**. Write these values in the appropriate column of the table.

[1]

(ii) Complete Fig. 1.2 by calculating *I*R, the potential drop, for each value of **y**, to three significant figures. [2]

For Examiner's Use

**(f)** Use the graph to find the value of **y** when *I***R** = 1.00 V

<b>y</b> =	cm	[1]
•		-

(g) The experiment is repeated using a cell with a larger voltage but the same wire. Draw a second curve on your graph to show the expected result. Explain how you decided this. Label this curve 'expected result'.

ioi	

2 X, Y and Z are three colourless solutions. Carry out the following tests which will enable you to suggest a name for each of these solutions. Solution **P** is an indicator. It is colourless in acid solution and pink in alkaline solution. (a) Place about 1 cm<sup>3</sup> of each solution X, Y and Z in separate test-tubes. Add two drops of solution **P** to each. Record your observations in the table. solution X solution Y solution Z [1] State your conclusion about each solution. solution X solution Y solution Z [2] **(b)** The acid is known to be either hydrochloric acid or sulphuric acid. Carry out the tests for a chloride and a sulphate as described on page 8 to decide the name of the acid. Describe the test and result that enables you to decide. Only one test need be described. name of acid [3] (c) (i) Place about 1 cm<sup>3</sup> of solution Y in a test-tube. Add 1 drop of the indicator P. Add drops of solution **X** until there is no further change. Record your observations. observations ..... [1] (ii) Repeat (c)(i) using solution **Z** in place of solution **Y**. Record your observations.

## **BLANK PAGE**

## **BLANK PAGE**

#### **CHEMISTRY PRACTICAL NOTES**

#### **Test for anions**

anion	test	test result
carbonate (CO <sub>3</sub> <sup>2-</sup> )	add dilute acid	effervescence, carbon dioxide produced
chloride (C <i>l</i> -) [in solution]	acidify with dilute nitric acid, then add aqueous silver nitrate	white ppt.
nitrate (NO <sub>3</sub> <sup>-</sup> ) [in solution]	add aqueous sodium hydroxide then aluminium foil; warm carefully	ammonia produced
sulphate (SO <sub>4</sub> <sup>2-</sup> ) [in solution]	acidify then add aqueous barium chloride <i>or</i> aqueous barium nitrate	white ppt.

## Test for aqueous cations

cation	effect of aqueous sodium hydroxide	effect of aqueous ammonia
ammonium (NH <sub>4</sub> <sup>+</sup> )	ammonia produced on warming	-
copper(II) (Cu <sup>2+</sup> )	light blue ppt., insoluble in excess	light blue ppt., soluble in excess giving a dark blue solution
iron(II) (Fe <sup>2+</sup> )	green ppt., insoluble in excess	green ppt., insoluble in excess
iron(III) (Fe <sup>3+</sup> )	red-brown ppt., insoluble in excess	red-brown ppt., insoluble in excess
zinc (Zn <sup>2+</sup> )	white ppt., soluble in excess giving a colourless solution	white ppt., soluble in excess, giving a colourless solution

### **Test for gases**

gas	test and test results
ammonia (NH <sub>3</sub> )	turns damp litmus paper blue
carbon dioxide (CO <sub>2</sub> )	turns limewater milky
chlorine (Cl <sub>2</sub> )	bleaches damp litmus paper
hydrogen (H <sub>2</sub> )	"pops" with a lighted splint
oxygen (O <sub>2</sub> )	relights a glowing splint
